PROJECT BACKGROUND: MountResilience has been formulated to increase the adaptation capacity of mountainous regions and communities so as to strengthen climate resilience within the European mountainous biogeographical region (Alpine biogeographical region). The project aims to accelerate the climate resilient transformation of 10 of the most relevant communities and regions located in the mountains in 9 European countries. 6 of the regions will develop and test transformative CCA solutions (technological and social innovations with nature-based solutions at their core). These solutions will address policy, governance, societal needs and behaviours, technological requirements, public and financing targets, and CC risks typical of mountainous areas. Regional quadruple-helix partnerships will use open innovation, participatory decision-making, stakeholder engagement approaches, and effective communication to mobilise, engage, and reach out to key communities. The remaining 4 regions will serve as "replicator" regions, repurposing CCA solutions and lessons learned from the demo regions in their regions through special initiatives to improve their adaptive capacity.

Work Packages:

WP 1. Support framework for transformation to climate resilience

WP 2. Regional Demonstrators

WP 3. Knowledge transfer, cross-fertilization and replication

WP 4. Communication, dissemination and networking

WP 5. Effective Upscaling and Exploitation for Sustainability

WP 6. Project management
